

The In2scienceUK IP Scholars Programme

Young people from low income backgrounds face major barriers when pursuing their careers in STEM & IP. The In2scienceUK Programme tackles these barriers through its innovative approach to support lasting positive change. We aim to help each young person secure their future while promoting diversity and inclusion in the STEM & IP sector as a whole. We work with young people of individual basis and give them the support they need to reach their potential and progress. 100% of the young people that take part in the in2scienceUK programme are:

- Recipients of free school meals.
- Have parents who do not hold higher education qualifications.
- From low income families.
- Live in a postcode in which few progress to higher education.

The In2scienceUK Programme

We have a four step programme which guarantees success by fostering a collaborative relationship with young people and developing projects that cater to their interests and career aspirations.

1 Mentoring by STEM Professionals

2. Employability Workshops

3. Essential Skills Days

4. Public Engagement Competitions

Why In2scienceUK Matters

In2scienceUK addresses the STEM skills gap by creating a pipeline of diverse and skilled young people within the sector.

Currently, only 11% of students on free school meals progress to top universities. However, independently compiled statistics conclude that the In2scienceUK programme has a significant impact with 83% of our students progressing to higher education and 56% to top universities. Young people progress with greater confidence and with knowledge on a range of STEM & IP career pathways. The young people we work with are able to access positive role models for life. By working with a diverse array of organisations from across the STEM & IP sector we hope to foster greater inclusion of disadvantaged groups and promote diversity and social mobility across degrees and careers in STEM & IP.

Support In2scienceUK

To date we have supported over 2500 young people. However, we need to expand the in2scienceUK Programme to ensure that more talented young people do not fall through the gap and that they can reach their career potential with our support. By supporting the in2scienceUK programme, you will be both supporting young people in need of help and contributing to diversity and inclusion within the IP sector. In light of the Covid-19 outbreak we are the only STEM focused organisation in the UK providing high quality workshops, skills days individual mentoring during this time.

Our 2020 Cohort

The IP Scholars Programme

This year In2scienceUK worked with over 150 schools and 600 young people across England. However, with 3000 applicants we are always looking to support more young people to achieve their potential in STEM & IP. It costs £4000.00 to provide five young person with a bespoke virtual work experience including, workshops, skills days and mentoring sessions. By supporting five young people you will be making a significantly positive difference to the lives of young people who have few positive role models and live in areas that suffer from both a lack of opportunities and stable careers. Together we can have a dramatic and positive impact on the lives of young people from low income and underrepresented communities by supporting social mobility and diversity in STEM & IP.

Our Commitment to You

If you partner with In2scienceUK we will announce your sponsorship to the wider IP community by publishing a blog on IP Inclusive, sending a newsletter to partner organisations and by adding your logo to our website and impact reports. We also inform the IP Federation on the activities of each IP organisation that supports our mission. By supporting five young people through The IP Scholars Programme we will give you case studies of the young people you have support. Furthermore, as part of your sponsorship, you can deliver workshop to our young people and give them an insight into your work and share apprenticeship or training opportunities available to them. We believe that creating a dialogue between the wider IP sector, STEM industry partners and educational institutions we can promote positive change, equality and inclusion.
